

Overview

JPRO® Fleet Diagnostics is a comprehensive vehicle diagnostics application that provides diagnostic and troubleshooting information about all electronic components on the vehicle. It supports all standard SAE J1587/J1708 and J1939 messages, parameters, and fault codes and can automatically launch OEM's specialized component diagnostics applications for further analysis. JPRO® Fleet Diagnostics

automatically connects you to all available vehicle databases to view live data, or to record and playback for future analysis. When connected, you can access various views of the data such as a component list, faults, data monitor, strip chart, etc.

JPRO® Fleet Diagnostics is sold as part of the JPRO® Fleet Service Software Bundle.

Features

- ✔ One easy to use program that diagnoses all vehicle components.
- ✔ Visibility to all components and their make and model numbers for easy identification.
- ✔ OEM Fault Codes and descriptions provided for easy diagnoses of potential problems.
- ✔ Clears active and inactive fault codes with the click of a button.
- ✔ Printable, easy to read reports for all component information, fault codes, and freeze frames.
- ✔ Launch OEM diagnostic applications with the click of a button.

- ✔ Graphical layouts for key data points on the engine, transmission, and brakes.
- ✔ Sort or filter information to find the data parameters of interest.
- ✔ View up to five selected data parameters in the strip chart
- ✔ Helps troubleshooting of intermittent problems by recording information and book marking problems with the touch of a button.
- ✔ Displays selected J1939 diagnostic messages, including freeze frames, emission information, broadcasts, and more!
- ✔ Supports Windows 2000, XP and Vista.
